
1 Required capability C in the product's Capability Description
post: x = v
keep: l ≤ h ≤ u
2 Capabilities of the primitives in the module's Capability Description
A: pre y = p0; post x += Δ at rate r
B: post y = p, at speed s
h = a·x + b·y + c, defined while A runs
3 Task C: methods, then goal regression
1 stated composition
2 existing composite
3 regress the goals
tried in this order;
the first plan is taken
goal x = v
A
achieves it
goal y = p0
B
A's pre
A alone: h leaves [l, u], not applied
A ∥ B, rate set: a·r + b·s = 0
4 In time h between the events
A alone
A ∥ B
[l, u]; • events
5 Planned skill, checked, Described
B: p0
A: x += Δ
B: y moves
