
AAS: the module and its components
Vocabulary: what the elements mean, and how they relate
1 A primitive realizes a capability of its component
Pump
Dispense
Module: Capability Description
Dosing, realized by Dispense
realizes
Dispense
Dosing
of the pump; never offered alone
Dosing: auxiliary, DIN 8580 pouring; its pre, post and keep, and FlowRate the rate of the content
2 A composite's steps contribute capabilities
Module: Skills, Dispensing
MoveAxis
Dispense
Home
Weigh
Volume means FillVolume
contributes
MoveAxis, Home
Positioning
not offered
Dispense
Filling
offered
Tare, Weigh
Weighing
not offered
3 The process capabilities are offered, specified by what the skill sets
Module: Capability Description, offered
Filling, by Dispensing
FillVolume 0.5 to 10 mL
ContainerType: stated
means
Volume
FillVolume
characterizes
Filling
BottomUpFilling
⊑
Filling
a skill written for it offers it instead
4 No skill yet: planned from the classes' constraints
Filling 15 mL: no skill covers it
plan
MoveAxis, Dispense 7.5 ×2, Home, Weigh: Described
offered after a reconfiguration
Filling
pre: empty; post: content = FillVolume
regressed over the capabilities of row 1, their pre, post, keep and rates; a narrower class keeps what it adds (BottomUpFilling)
