
Integration through the AASs
Integrator
modreg
builds, registers
Planner
process sequence planner
modplan
plans, discovers
modsync
reconciles
Module · FORTE
the running program
Module plugged in
Mount and wire it, hand over its spec
Build its and its components' AASs
Derive its offers from its skills
Register it, add it to the line's BoM
New product: its AAS published
Discover what it offers after a reconfiguration
Match each step's required capability
after a reconfiguration
Plan a skill for the requirement
Write it into the Skills submodel
not offered
offered now
Compare the program with Skills
management commands
Create, connect, start blocks online
Verify, record what was built
Bind each step: module, skill, inputs
Check the plan
Refused, with the findings
does not fit
fits
Approved: ready to run
