Product AAS

general recipe · one per product

what it is made of
Hierarchical Structures (IDTA 02011)

the processes it needs, with its values
Process Parameters (IDTA 02031, extended)

the capabilities they require
Capability Description (IDTA 02020)

the recipe: its steps in order
Production Sequence

kept by the product designer

Capability
the same meaning, the value in range

Filling required
FillVolume 2.0 mL

✓

Filling offered
FillVolume 0.5–10 mL

realized by the skill
Dispensing

Resource AAS

line, module, component · one per asset

what it is made of
Hierarchical Structures (IDTA 02011)

the capabilities it offers
Capability Description (IDTA 02020)

its skills, and what each is made of
Skills

how it is called, where its data goes
Asset Interfaces Description, Mapping

what was built, where its values go
Control Configuration, Variables

from the vendor; changed online by the integrator's tools

a recipe step, the value handed to an input

Process AAS

master recipe · one per product and line

per step: the module and its skill
Bindings

what each input of the skill is handed
Bindings

whether the plan fits
Validation

kept by the line engineer

the module, its skill, the input handed to

What the three make possible

Plug and produce
a module registered with its AAS; its offers derived from its skills

Matching
each step's required capability against what the line offers

Planning
a skill planned for a requirement no skill meets yet

Reconfiguration
the program brought online to what Skills describes

Operation
skills called as the interface description says
